- Integrates with IBM Content Manager OnDemand
- Send mail in email via links to a shared file system
- Works on Win98, 2000, and NT

Mailroom to Email: A complete mail automation and distribution system using your company's existing email system.

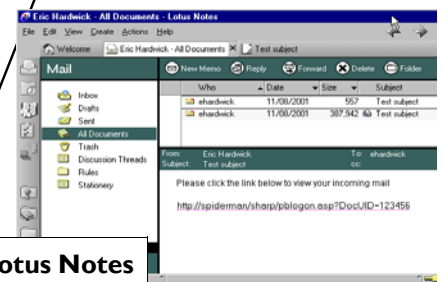

Incoming mail is scanned and distributed via email using Microsoft Outlook, Lotus Notes, or IBM Content Manager OnDemand. The end result is a system that delivers incoming mail that increases mailroom productivity, saves time, and is easy to use.

The MailScan solution is a three-part system of interlocking pieces. Each piece is designed to seamlessly integrate into your existing email environment. Here's a look at what's included:

- **Barcode Label Printing Software and Hardware**
Easy to use software is included to print sheets of labels on standard laser printers or individual labels on a personal barcode label printer.
- **Outlook and Lotus Notes Integration Software**
The software that comes with the package can read the Contacts from Outlook or Notes. Alternatively, you can use any ODBC compliant database that contains valid Email addresses.
- **MailScan Scanning Module for Kofax Ascent Capture 5**
MailScan is scanned using the industry-leading Kofax Ascent Capture 5 software. Kofax supports the latest scanners from Fujitsu, Bell & Howell, Kodak, and many others.
- **IBM Content Manager OnDemand Option**
MailScan has a built-in option that stores the scanned documents in IBM's Content Manager OnDemand system. Mail can then be stored in an IBM archive and the recipient's email contains a link to this archive. After entering a user ID and password, the document is displayed.

Microsoft Outlook

Lotus Notes
